CONTENTS

NOTE:

RoHS compliant products have <G> mark on the spec name plate.

Use the specified refrigerant only

Never use any refrigerant other than that specified.Doing so may cause a burst, an explosion, or fire when the unit is being used, serviced, or disposed of. Correct refrigerant is specified in the manuals and on the spec labels provided with our products.

We will not be held responsible for mechanical failure, system malfunction, unit breakdown or accidents caused by failure to follow the instructions.

PERFORMANCE CURVES

MUFZ-KJ25VE MUFZ-KJ35VE MUFZ-KJ50VE

The standard specifications apply only to the operation of the air conditioner under normal conditions. Since operating conditions vary according to the areas where these units are installed, the following information has been provided to clarify the operating characteristics of the air conditioner under the conditions indicated by the performance curve.

(1) GUARANTEED VOLTAGE

198 ~ 264 V, 50 Hz

(2) AIR FLOW

Air flow should be set at MAX.

(3) MAIN READINGS

(1) Indoor intake air wet-bulb temperature: °C [WB] (2) Indoor outlet air wet-bulb temperature: °C [WB] Cooling (3) Outdoor intake air dry-bulb temperature: °C [DB] (4) Total input: (5) Indoor intake air dry-bulb temperature: °C [DB] °C [WB] (6) Outdoor intake air wet-bulb temperature: Heating (7) Total input:

Indoor air wet and dry bulb temperature difference on the left side of the following chart shows the difference between the indoor intake air wet and dry bulb temperature and the indoor outlet air wet and dry bulb temperature for your reference at service.

How to measure the indoor air wet and dry bulb temperature difference

- 1. Attach at least 2 sets of wet and dry bulb thermometers to the indoor air intake as shown in the figure, and at least 2 sets of wet and dry bulb thermometers to the indoor air outlet. The thermometers must be attached to the position where air speed is high.
- 2. Attach at least 2 sets of wet and dry bulb thermometers to the outdoor air intake. Cover the thermometers to prevent direct rays of the sun.
- 3. Check that the air filter is cleaned.
- 4. Open windows and doors of room.
- 5. Press the EMERGENCY OPERATION switch once (twice) to start the EMERGENCY COOL (HEAT) MODE.
- 6. When system stabilizes after more than 15 minutes, measure temperature and take an average temperature.
- 7. 10 minutes later, measure temperature again and check that the temperature does not change.

8-1. CAPACITY AND INPUT CURVES

NOTE: The above broken lines are for the heating operation without any frost and defrost operation.

8-2. CAPACITY AND INPUT CORRECTION BY OPERATIONAL FREQUENCY OF COMPRESSOR

8-3. HOW TO OPERATE FIXED-FREQUENCY OPERATION

<Test run operation>

- 1. Press EMERGENCY OPERATION switch to start COOL or HEAT mode (COOL: Press once, HEAT: Press twice).
- 2. Test run operation starts and continues to operate for 30 minutes.
- 3. Compressor operates at rated frequency in COOL mode or 58 Hz in HEAT mode.
- 4. Indoor fan operates at High speed.
- 5. After 30 minutes, test run operation finishes and EMERGENCY OPERATION starts (operation frequency of compressor varies).
- 6. To cancel test run operation (EMERGENCY OPERATION), press EMERGENCY OPERATION switch or any button on remote controller.

8-4. OUTDOOR LOW PRESSURE AND OUTDOOR UNIT CURRENT

COOL operation

- ① Both indoor and outdoor unit are under the same temperature/ humidity condition.
- ② Operation: TEST RUN OPERATION (Refer to 8-3.)

| Dry-bulb temperature (°C) | Relative humidity (%) |
|---------------------------|-----------------------|
| 20 | 50 |
| 25 | 60 |

ACTUATOR CONTROL

MUFZ-KJ25VE MUFZ-KJ35VE MUFZ-KJ50VE

9-1. OUTDOOR FAN MOTOR CONTROL

The fan motor turns ON/OFF, interlocking with the compressor.

[ON] The fan motor turns ON 5 seconds before the compressor starts up.

[OFF] The fan motor turns OFF 15 seconds after the compressor has stopped running.

9-2. R.V. COIL CONTROL

 Heating
 ON

 Cooling
 OFF

 Dry
 OFF

NOTE: The 4-way valve reverses for 5 seconds right before start-up of the compressor.

9-3. RELATION BETWEEN MAIN SENSOR AND ACTUATOR

SERVICE FUNCTIONS

MUFZ-KJ25VE MUFZ-KJ35VE MUFZ-KJ50VE

10-1. CHANGE IN DEFROST SETTING

Changing defrost finish temperature

<JS> To change the defrost finish temperature, cut/solder the JS wire of the outdoor inverter P.C. board. (Refer to 11-6-1.)

| | Jumper wire | Defrost finish temperature (°C) |
|-----|----------------------------|---------------------------------|
| JS | Soldered (Initial setting) | 5 |
| 133 | None (Cut) | 10 |

10-2. PRE-HEAT CONTROL SETTING

PRE-HEAT CONTROL

MUFZ-KJ25/35

When moisture gets into the refrigerant cycle, it may interfere the start-up of the compressor at low outside temperature. The pre-heat control prevents this interference. The pre-heat control turns ON when the discharge temperature thermistor is 20°C or below. When the pre-heat control turns ON, the compressor is energized. (About 50 W)

MUFZ-KJ50

Prolonged low load operation, in which the thermostat is OFF for a long time, at low outside temperature (0°C or less) may cause the following troubles. To prevent those troubles, activate the pre-heat control.

- 1) If moisture gets into the refrigerant cycle and freezes, it may interfer the start-up of the compressor.
- 2) If liquid refrigerant collects in the compressor, a failure in the compressor may occur.

The pre-heat control turns ON when the compressor temperature is 20°C or below. When the pre-heat control turns ON, the compressor is energized. (About 70 W)

Pre-heat control setting

<JK>

ON: To activate the pre-heat control, cut JK wire of the inverter P.C. board.

OFF: To deactivate the pre-heat control, solder JK wire of the inverter P.C. board. (Refer to 11-6.1)

NOTE: When the inverter P.C. board is replaced, check the jumper wires, and cut/solder them if necessary.

TROUBLESHOOTING

MUFZ-KJ25VE MUFZ-KJ35VE MUFZ-KJ50VE

11-1. CAUTIONS ON TROUBLESHOOTING

- 1. Before troubleshooting, check the following
 - 1) Check the power supply voltage.
 - 2) Check the indoor/outdoor connecting wire for miswiring.
- 2. Take care of the following during servicing
 - 1) Before servicing the air conditioner, be sure to turn OFF the main unit first with the remote controller, and then after confirming the horizontal vane is closed, turn OFF the breaker and/or disconnect the power plug.
 - 2) Be sure to turn OFF the power supply before removing the front panel, the cabinet, the top panel, and the electronic control P.C. board.
 - 3) When removing the electrical parts, be careful of the residual voltage of smoothing capacitor.
 - 4) When removing the electronic control P.C. board, hold the edge of the board with care NOT to apply stress on the components.
 - 5) When connecting or disconnecting the connectors, hold the housing of the connector. DO NOT pull the lead wires.

<Incorrect> <Correct>

ead wiring Housir.

3. Troubleshooting procedure

- Check if the OPERATION INDICATOR lamp on the indoor unit is flashing on and off to indicate an abnormality.
 To make sure, check how many times the OPERATION INDICATOR lamp is flashing on and off before starting service work.
- 2) Before servicing, check that the connector and terminal are connected properly.
- 3) When the electronic control P.C. board seems to be defective, check the copper foil pattern for disconnection and the components for bursting and discoloration.

25

4) Refer to 11-2 and 11-3.

11-2. FAILURE MODE RECALL FUNCTION

Outline of the function

This air conditioner can memorize the abnormal condition which has occurred once.

Even though LED indication listed on the troubleshooting check table (11-3.) disappears, the memorized failure details can be recalled.

1. Flow chart of failure mode recall function for the indoor/outdoor unit

※2. Blinking pattern when the indoor unit is abnormal:

2. Flow chart of the detailed outdoor unit failure mode recall function

Operational procedure The outdoor unit might be abnormal. Check if the outdoor unit is abnormal according to the following procedures Make sure that the remote controller is set to the failure mode recall function. %1. Regardless of normal or abnormal condition, 2 short With the remote controller headed towards the indoor unit, press TEMP beeps are emitted as the signal is received. ⊕ button to adjust the set temperature to 25°C. ※1 NOTE: It takes up to 1 minute to indicate the outdoor unit abnormality. Even if the OPERATION INDICATOR lamp is not lighting, keep checking at least 1 minute or longer. Does the left lamp of the OPERATION INDICATOR lamp on the indoor unit blink at the interval of 0.5 seconds? Blinks: The outdoor unit is abnormal. Beep is emitted at the same timing as the blinking of the left lamp of the OPERATION INDICATOR lamp. **2 (OFF) Yes (Blinks) The outdoor unit is abnormal. Check the blinking pattern, and identify the abnormal point by referring to the outdoor unit failure mode table (11-2.3.). The outdoor unit is normal. Make sure to check at least two consecutive blinking cycles. x2 Releasing the failure mode recall function Release the failure mode recall function accord-Release the failure mode recall function by the following procedures. Turn OFF the power supply and turn it ON again. Press RESET button of the remote controller. ing to the left mentioned procedure. Repair the failure parts Deleting the memorized abnormal condition ① After repairing the unit, recall the failure mode again according to "Setting up the failure mode recall *3 The information regarding whether the connected outdoor unit is a low-standby-② Press OPERATE/STOP (ON/OFF) button of the remote controller (the set temperature is displayed) with power model or a non-low-standby-power the remote controller headed towards the indoor unit. ③ Press EMERGENCY OPERATION switch so that the memorized abnormal condition is deleted. *3 model will also be initialized. (Default= compatible with a low-standby-(4) Release the failure mode recall function according to "Releasing the failure mode recall function" menpower model) NOTE: 1. Make sure to release the failure mode recall function after it is set up, otherwise the unit cannot operate properly. 2. If the abnormal condition is not deleted from the memory, the last abnormal condition is kept memorized. *2.Blinking pattern when outdoor unit is abnormal: Blinking at 0.5-Blinking at 0.5second interval ON OFF No beep Beeps Beeps No beep

11-5. TROUBLESHOOTING FLOW

A How to check inverter/compressor

B Check of open phase

With the connector between the compressor and the power module (IC700)(MUFZ-KJ25/35)/ IGBT module (IC700)(MUFZ-KJ50) disconnected, activate the inverter and check if the inverter is normal by measuring the voltage balance between the terminals.

Output voltage is 50 - 130 V. (The voltage may differ according to the tester.)

<< Operation method>>

Start cooling or heating operation by pressing EMERGENCY OPERATION switch on the indoor unit. (TEST RUN OPERATION: Refer to 8-3.)

<<Measurement point>>

At 3 points

BLK (U)-WHT (V)

BLK (U)-RED (W) WHT(V)-RED (W)

NOTE: 1. Output voltage varies according to power supply voltage.

- 2. Measure the voltage by analog type tester.
- 3. During this check, LED of the inverter P.C. board flashes 9 times. (Refer to 11-6.1.)

* Measure AC voltage between the lead wires at 3 points.

© Check of compressor

(D) Check of compressor winding

 Disconnect the connector between the compressor and the power module (IC700)(MUFZ-KJ25/35)/ IGBT module (IC700)(MUFZ-KJ50), and measure the resistance between the compressor terminals.

<<Measurement point>>

At 3 points

BLK-WHT BLK-RED

* Measure the resistance between the lead wires at 3 points.

WHT-RED

<<Judgement>>

Refer to 11-4.

 $0 [\Omega]$ Abnormal [short] Infinite $[\Omega]$ ······Abnormal [open]

NOTE: Be sure to zero the ohmmeter before measurement.

(E) Check of compressor operation time

• Connect the compressor and activate the inverter. Then measure the time until the inverter stops due to over current.

<<Operation method>>

Start heating or cooling operation by pressing EMERGENCY OPERATION switch on the indoor unit. (TEST RUN OPERATION: Refer to 8-3.)

<<Measurement>>

Measure the time from the start of compressor to the stop of compressor due to overcurrent.

(F) Check of compressor start failure

Confirm that 0~4 is normal.

- •Electrical circuit check
- ①. Contact of the compressor connector

G Check of outdoor thermistors

Disconnect the connector of thermistor in the Inverter P.C. board (see below table), and measure the resistance of thermistor.

MUFZ-KJ25/35

| Thermistor | Symbol | Connector, Pin No. | Board |
|------------------------------------|--------|-----------------------------|---------------------|
| Defrost | RT61 | Between CN641 pin1 and pin2 | |
| Discharge temperature | RT62 | Between CN641 pin3 and pin4 | |
| Fin temperature | RT64 | Between CN642 pin1 and pin2 | Inverter P.C. board |
| Ambient temperature | RT65 | Between CN643 pin1 and pin2 | |
| Outdoor heat exchanger temperature | RT68 | Between CN644 pin1 and pin3 | |

MUFZ-KJ50

| Thermistor | Symbol | Connector, Pin No. | Board | |
|------------------------------------|--------|-----------------------------|---------------------|--|
| Defrost | RT61 | Between CN671 pin1 and pin2 | | |
| Discharge temperature | RT62 | Between CN671 pin3 and pin4 | | |
| Fin temperature | RT64 | Between CN673 pin1 and pin2 | Inverter P.C. board | |
| Ambient temperature | RT65 | Between CN672 pin1 and pin2 | | |
| Outdoor heat exchanger temperature | RT68 | Between CN671 pin5 and pin6 | | |

(H) Check of R.V. coil

MUFZ-KJ25/35

- * First of all, measure the resistance of R.V. coil to check if the coil is defective. Refer to 11-4.
- * In case CN721 is disconnected or R.V. coil is open, voltage is generated between the terminal pins of the connector although no signal is being transmitted to R.V. coil.

 Check if CN721 is connected.

Unit operates COOL mode even if it is set to HEAT mode.

Unit operates HEAT mode even if it is set to COOL mode.

MUFZ-KJ50

- ** First of all, measure the resistance of R.V. coil to check if the coil is defective. Refer to 11-4.
- * In case CN602 is disconnected or R.V. coil is open, voltage is generated between the terminal pins of the connector although no signal is being transmitted to R.V. coil. Check if CN602 is connected.

Unit operates COOL mode even if it is set to HEAT mode.

Unit operates HEAT mode even if it is set to COOL mode.

OBH695

J Check of power supply

39

NOTE: After check of LEV, do the undermentioned operations.

- Turn OFF the power supply and turn it ON again.
 Press RESET button on the remote controller.

© Electromagnetic noise enters into TV sets or radios

Even if all of the above conditions are fulfilled, the electromagnetic noise may enter, depending on the electric field strength or the installation condition (combination of specific conditions such as antennas or wiring). Check the following before asking for service.

- Devices affected by the electromagnetic noise
 - TV sets, radios (FM/AM broadcast, shortwave)
- 2. Channel, frequency, broadcast station affected by the electromagnetic noise
- 3. Channel, frequency, broadcast station unaffected by the electromagnetic noise
- 4. Layout of:
- indoor/outdoor unit of the air conditioner, indoor/outdoor wiring, earth wire, antennas, wiring from antennas, receiver
- 5. Electric field intensity of the broadcast station affected by the electromagnetic noise
- 6. Presence or absence of amplifier such as booster
- 7. Operation condition of air conditioner when the electromagnetic noise enters in
- 1) Turn OFF the power supply once, and then turn ON the power supply. In this situation, check for the electromagnetic noise.
- 2) Within 3 minutes after turning ON the power supply, press OPERATE/STOP (ON/OFF) button on the remote controller for power ON, and check for the electromagnetic noise.
- 3) After a short time (3 minutes later after turning ON), the outdoor unit starts running. During operation, check for the electromagnetic noise.
- 4) Press OPERATE/STOP (ON/OFF) button on the remote controller for power OFF, when the outdoor unit stops but the indoor/outdoor communication still runs on. In this situation, check for the electromagnetic noise.

DISASSEMBLY INSTRUCTIONS

<"Terminal with locking mechanism" Detaching points>

The terminal which has the locking mechanism can be detached as shown below.

There are two types (refer to (1) and (2)) of the terminal with locking mechanism.

The terminal without locking mechanism can be detached by pulling it out.

Check the shape of the terminal before detaching.

(1) Slide the sleeve and check if there is a locking lever or not.

(2) The terminal with this connector has the locking mechanism.

12-1. MUFZ-KJ25VE MUFZ-KJ35VE

NOTE: Turn OFF power supply before disassembly.

OPERATING PROCEDURE PHOTOS 1. Removing the cabinet Photo 1 (1) Remove the screw fixing the service panel. Screws of the (2) Pull down the service panel and remove it. 2. Removing the inverter assembly, inverter P.C. board

- (1) Remove the cabinet and panels. (Refer to 1.)
- (2) Disconnect the lead wire to the reactor and the following connectors:

<Inverter P.C. board>

CN721 (R.V. coil)

CN931, CN932 (Fan motor)

CN641 (Defrost thermistor and discharge temperature thermistor)

CN643 (Ambient temperature thermistor)

CN644 (Outdoor heat exchanger temperature thermistor) CN724 (LEV)

- (3) Remove the compressor connector (CN61).
- (4) Remove the screws fixing the heat sink support and the separator.
- (5) Remove the fixing screws of the terminal block support and the back panel.
- (6) Remove the inverter assembly.
- (7) Remove the screw of the earth wire and screw of the terminal block support.
- (8) Remove the heat sink support from the P.C. board support.
- (9) Remove the screw of the inverter P.C. board and remove the inverter P.C. board from the P.C. board support.

3. Removing R.V. coil

- (1) Remove the cabinet and panels. (Refer to 1.)
- (2) Disconnect the following connectors: <Inverter P.C. board> CN721 (R.V. coil)
- (3) Remove the R.V. coil.

4. Removing the discharge temperature thermistor, defrost thermistor, outdoor heat exchanger temperature thermistor and ambient temperature thermistor

- (1) Remove the cabinet and panels. (Refer to 1.)
- (2) Disconnect the lead wire to the reactor and the following connectors:

<Inverter P.C. board>

CN641 (Defrost thermistor and discharge temperature thermistor)

CN643 (Ambient temperature thermistor)

CN644 (Outdoor heat exchanger temperature thermistor)

- (3) Pull out the discharge temperature thermistor from its holder.
- (4) Pull out the defrost thermistor from its holder. (Photo 6)
- (5) Pull out the outdoor heat exchanger temperature thermistor from its holder. (Photo 6)
- (6) Pull out the ambient temperature thermistor from its holder.

5. Removing outdoor fan motor

- (1) Remove the cabinet and panels. (Refer to 1.)
- (2) Disconnect the following connectors: <Inverter P.C. board> CN931, CN932 (Fan motor)
- (3) Remove the propeller nut.
- (4) Remove the propeller.
- (5) Remove the screws fixing the fan motor.
- (6) Remove the fan motor.

6. Removing the compressor and 4-way valve

- (1) Remove the cabinet and panels. (Refer to 1.)
- (2) Remove the inverter assembly. (Refer to 2.)
- (3) Recover gas from the refrigerant circuit.

NOTE: Recover gas from the pipes until the pressure gauge shows 0 MPa.

- (4) Detach the brazed part of the suction and the discharge pipe connected with compressor.
- (5) Remove the nuts of compressor legs.
- (6) Remove the compressor.
- (7) Detach the brazed part of pipes connected with 4-way valve.
